Market Overview

CRYPTO TRADING

Crypto trading involves buying and selling digital currencies on online exchanges. The aim is to profit from the often significant price fluctuations of these assets. It's a speculative activity with the potential for both high gains and substantial losses.

WHAT IS ARBITRAGE ?

Arbitrage is the simultaneous buying and selling of the same asset in different markets. This strategy aims to profit from minor price discrepancies between these markets. Because the transactions are executed almost instantly, it's considered a low-risk way to make money from market inefficiencies.
